Did you ever wonder why such an alarmingly high percentage of Americans are obese, diabetic, depressed and suffering from cancer, heart disease, kidney disorders and skin problems? Now consider the fact that Americans pay more per capita for health care than any other nation in the world. Americans pay the highest prices, by far, for medications, medical imaging scans, blood work, surgeries, chemotherapy and hospital stays. And yet what does America have to show for it? The most universally diseased population in the world -- and a nation on the verge of bankruptcy caused in part by mainstream medicine.

Mainstream medicine has reached such a level of insanity that its corporations now claim intellectual ownership over nearly 20 percent of the human genome. This has all been done to create a corporate monopoly over human genes in the same way that mainstream medicine has already created an FDA-enforced monopoly over isolated chemicals -- many of which were ripped off from nature.

At the same time that mainstream medicine has created for itself an oppressively-enforced monopoly over medical treatments, it has brought America to the brink of bankruptcy while delivering only pain, suffering and pharmaceutical addiction to the masses. Mainstream medicine says poison is medicine (chemotherapy) while teaching people that nutrition is useless. This is the system of medicine that dismisses the value of sunlight, colon cleansing, acupuncture and juice cleansing, but it firmly believes in toxic vaccines, chemotherapy, cancer-causing mammograms and dispensing a lifetime of poisonous medications to little babies who are now being diagnosed with depression before they're even old enough to speak!
