

Concerns Linger Over Safety Of Chemical Used in Baby Bottles

Wednesday, 03 September 2008 15:25 -

Government experts on Wednesday released a final report on the safety of a chemical used in plastic baby bottles, saying they have "some concern" the chemical is linked to health and developmental problems.

The chemical, bisphenol-A, or BPA, makes plastic hard and shatterproof, and is used in hundreds of consumer products from plastic baby bottles to CDs.
