

In this video, Robert Slovak, one of the pioneers in water filtration systems shares his extensive insider knowledge about one of the more recently recognized threats discovered in your water supply -- disinfection byproducts, or DBPs.

If you have not heard of DBPs before, you need to pay close attention as it turns out that DBPs, not chlorine, are responsible for nearly all the toxic effects of chlorinated water. Chlorine by itself is relatively harmless, but its side effects, by producing DBPs, is what causes nearly all of the problems.

As it turns out, DBPs are over 10,000 times more toxic than chlorine, and out of all the other toxins and contaminations present in your water, such as fluoride and miscellaneous pharmaceutical drugs, DBPs may be the absolute worst of the bunch.
