

"Project Camelot was a social science research project of the United States Army in 1964. The goal of the project was to assess the causes of violent social rebellion and to identify the actions a government could take to prevent its own overthrow."

For those who still don't get it:

Tea kettles don't explode because they have a whistle on them that blows off steam when the temperature of the water rises. Got it? So the alphabet soup agencies put "social control valves" of various kinds on the societal tea kettle (think of the U.S. Army's 1964 'Project Camelot' study) so that when society begins to get upset at the rampant, malignant corruption in government, the societal tea kettle simply blows off steam through the "whistle" thingy instead of exploding in social unrest and a popular uprising.
